

Chanson H3 Pre-Filter For City Water with Fluoride

How will the Chanson H3 Pre-Filter Help you?

The Chanson H3 Pre-Filter removes chemicals that are added to or naturally in our municipal water supply. The three (3) ten inch filters, with a total of 10 stages of filtration, remove 99% of chlorine, bad tastes, odors, heavy metals, bacteria and fluoride and many more. The H3 filter also addresses the problem of pharmaceuticals being present in our water supplies; due to years of people flushing their medications down the drain.

We have never seen a single ionizer filter capable of performing at the level of the H3 pre-filter. By the adding the H3 pre-filter to any water ionizer system you are protecting yourself and your family against dangerous and harmful contaminants. The H3 filter allows all natural minerals to pass through making it the most advanced home filter available today; and providing you with the healthiest water from the comfort of your home.

Requirements of the Chanson H3 Pre-Filter

The Chanson H3 Pre-Filter can be used on its own or in conjunction with a water ionizer. However, for the healthiest drinking water on the planet we recommend that you invest in a Chanson Water ionizer to accompany your H3 pre-filter. Start enjoying the benefits of clean, cool, and refreshing water with the Chanson H3 Pre-Filter.

Filter descriptions and what contaminants they remove:

- GAC Chlorine Pre-Filter: The highest quality Granulated Activated Carbon (GAC) removes all sediments, odor, bad taste, chlorine, some bacteria and a host of other unwanted materials from your water.
- Fluoride/Arsenic/Lead Pre-filter: Regenerated Activated Alumina filter removes 99% of Fluoride, Arsenic and Lead. (Our H3 is one of the only filters that uses regenerated alumina, its 60% more effective at Fluoride removal).
- KDF-55 plus "super carbon": Removes heavy metals, Chlorides, bacteria, and much more. The KDF-55 is extremely expensive but, is one of the most effective and safest filter medias available; when combined with our "super carbon" (a carbon that has gone through an additional process that increases its performance up to 40% over regular carbon). This filter removes heavy metals like Iron and Lead and also inhibit bacteria. We include the KDF/super carbon in our last stage to catch anything that get past the Alumina filter.

The Chanson H3 Pre-Filter comes in three sizes depending on use:

- Standard H3 for use with under-counter water ionizer
- H3 MUC unit for installation under the counter and plumbed into the cold water line or attached to counter-top ionizer.
- By special request for installation on top of the counter-top ionizer.
